Course Objective

1 year Advanced Diploma in Midwifery course at MAHSA University college designed to introduce the registered nurses to the provision of care of the woman and her family throughout pregnancy, birth and the postnatal period. Emphasis on treating woman and child as individual with unique need expectations and aspirations. The course provide theoretical learning in the classroom and practical session in the simulation ward using the latest simulation delivery model. The midwifery students are provided with learning opportunities to develop communication, counseling, cross cultural sensitivity, and technical skills relevant to normal and complicated pregnancy, childbirth, postpartum care and family health promotion.

Teaching Methodology

There are variety of teaching methods that promote creativity and life long learning among students such as face-to-face lecture, problem-solving approach, self-directed study, online discussion, blackboard, tutorial, case study presentation (evidence-based practice) and international exposure.

Clinical Exposure

There will be sufficient clinical exposure in every part of midwifery practice. Students gain experience in various disciplines as required by Midwifery Board Malaysia. The teaching hospitals will be those with whom MOU has been signed.

Course Structures

The 4 integral strands in the curriculum are

- **Strand 1**: Nursing science core (theory and practical)
- **Strand 2**: Health science (anatomy and physiology)
- **Strand 3**: Planned Parenthood, delivery, home visiting & child health
